

Our patented micro-encapsulation technique protects the active substances from degradation under thermal processes in feed production and during storage. Thus, the volatile essential oils can unfold their maximum efficacy by being released where they are needed: in the gastro-intestinal tract of the animal.

The Delacon guarantee

To ensure safety and efficiency, all Delacon products are proven and tested in-depth prior to market entry.

Distributor

Delacon™ **BIOSTRONG®**

With the highest developed natural solution:
Fit chicks perform better!

Delacon **BIOSTRONG®** is a phytogenic product line for best performance in poultry production.

Upon its launch in 2000, it was the first phytogenic product range for poultry. The innovative formulation is based on in-depth knowledge, broad experience and extensive research.

performing nature

Naturally, strong for every challenge.

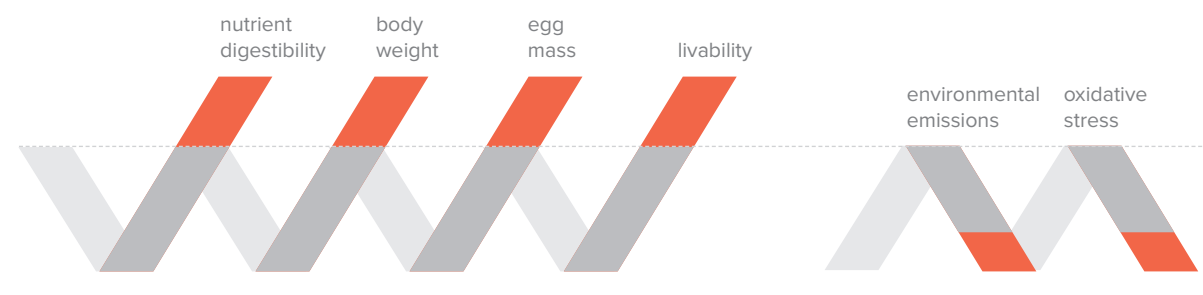

Profitable poultry production means obtaining the best return on investment. Especially feed conversion plays a key role. Achieving best results in daily gain or laying rate while keeping feed costs low is the equation perfectly solved by Delacon **BIOSTRONG**.

Improved feed efficiency reduces production costs and increases profitability. Delacon **BIOSTRONG** is designed to deliver best performance in poultry production by improving feed efficiency and thus, leading to increased weight gain and enhanced egg production. At the same time, our phytogenic feed additives ensure a safe and sustainable production without residues in meat and eggs.

Delacon **BIOSTRONG** is an all-natural product line, fully using synergistic effects of different groups of active substances. The phytogenic formulation consists of carefully selected essential oils and plant extracts, which are perfectly aligned to the needs of avian species.

Profitable poultry production with Delacon **BIOSTRONG**:

- Increases nutrient digestibility
- Improves feed conversion ratio
- Supports intestinal health
- Reduces environmental emissions (ammonia, CO₂)
- Supports the animals during challenging periods, e.g. heat stress

holistic benefits of Delacon **BIOSTRONG**

Delacon **BIOSTRONG** can be applied either "on-top" in the feed ration or according to our **PERFORMIZER** concept, using nutritional matrix values to reduce feed costs by optimizing the total mixed ration.
