Distributor

# Delacon FRESTA®

Our contribution to a sustainable livestock production

## Healthy pigs raise your profit!

Delacon **FRESTA**® is a 100% phytogetic solution for maximum performance in pig production.

With Delacon **FRESTA**® you trust in a well-established, safe and effective product range, including the first phytogetic product achieving the EU registration as a zootechnical feed additive.

performing nature

# For a healthy life.

## From the start.

Pig production faces many challenges, mainly due to market pressure, diseases, environmental conditions and other constraints, which have a direct impact on pigs' feed formulations throughout their lives. Moreover, optimized feed efficiency – meaning highest productivity with the lowest possible feed costs – is the basis for profitable pig production.

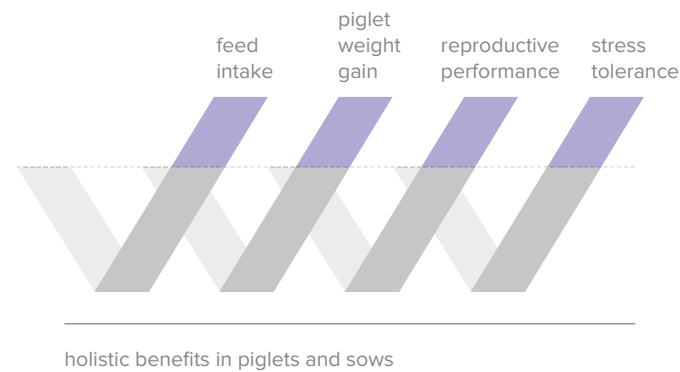

Feed intake is a major challenge with regards to piglets as well as sows during lactation. Maximum feed intake is important for young pigs in order to support the development of the intestinal tract and, consequently, their later performance. In addition to feed intake, nutrient digestibility and antioxidant properties are crucial in these critical periods. The main objective with regards to sows is to increase

the milk yield and quality as well as to maximize litter weight gain, while keeping the sow in good body condition for further parities.

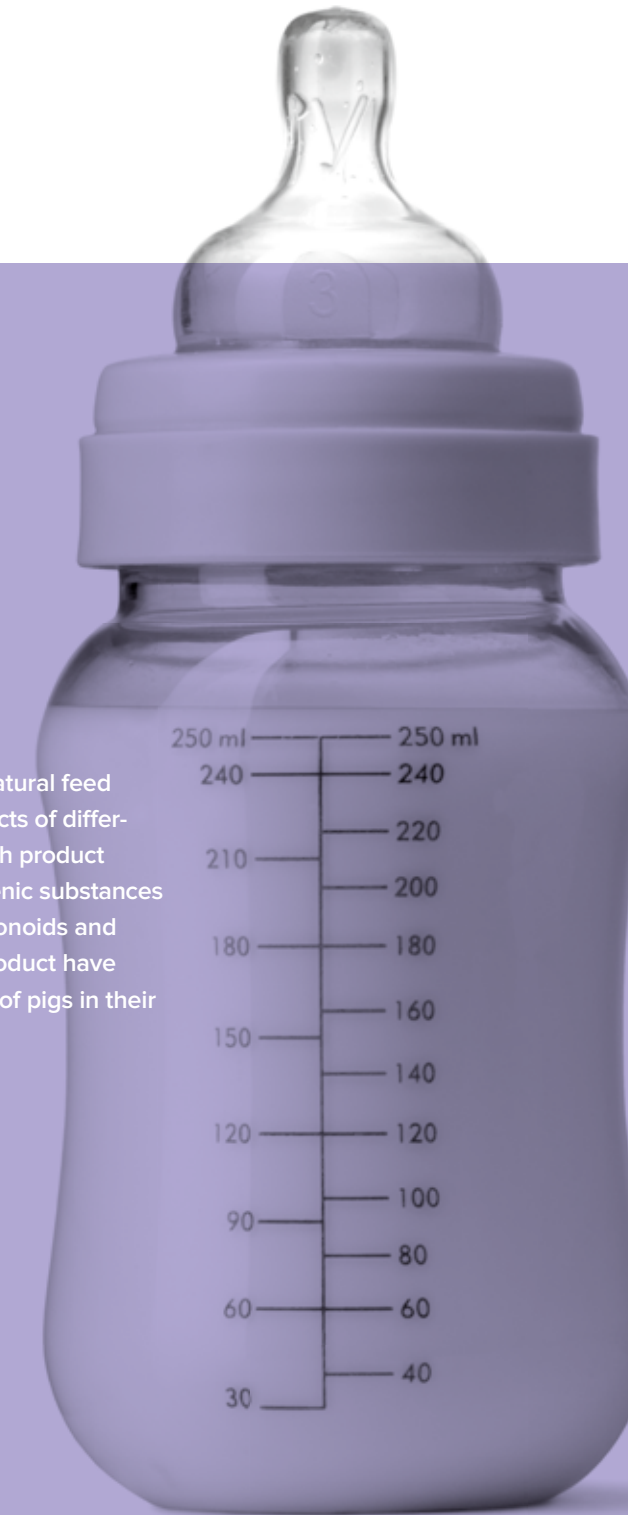

The product line of Delacon **FRESTA** is designed to address the needs of pigs with target-specific formulations. Our phytogenic feed additives ensure a safe and sustainable production, and completely replace antibiotic growth promoters, thus providing residue-free end products. Our patented micro-encapsulation technique protects the essential oils used in Delacon **FRESTA** from degradation under thermal processes in feed production and during storage. Thus, the volatile substances can unfold their maximum efficacy by being released where they are needed: in the gastro-intestinal tract of the animal.

### Profitable pig production with Delacon **FRESTA**:

- Increases feed intake
- Improves nutrient utilization
- Supports intestinal health
- Improves feed conversion rate
- Increases growth performance
- Improves reproductive performance
- Increases stress tolerance and vitality
- Reduces environmental emissions

Delacon **FRESTA** is a range of all-natural feed additives, fully using synergistic effects of different groups of active substances. Each product combines carefully selected phytogenic substances like essential oils, herbs, spices, flavonoids and saponins. All ingredients within a product have been perfectly aligned to the needs of pigs in their respective life phases.
